# Product Information Crimp-Type Cable Hangers

**Sunbelt Stud Welding, Inc.**

**Your complete source for stud welding  
products and service.**

Another popular and quick method of securing electrical cables is by using our Crimp-Type Cable Hangers. These can be used on offshore production platforms, skids, boats, barges and in chemical plants.

Crimp Type Cable Hangers work well when you only need to secure four or fewer cables.

The sizes available are single, double, triple and four stacked. This cable hanger has an internally threaded (3/8-16) tap pad which easily attaches to a standard 3/8" diameter weld stud.

Simply weld a standard 3/8" diameter weld stud to your specified location and screw on your desired Crimp Type Cable Hanger, add the electrical cable(s) and then crimp the cable hanger to secure.

Crimp-Type Cable Hangers are readily available in 316SS.

Please contact one of our sales representatives for more information.
